Restart Your PC
from your External USB Hard Drive

BounceBack[®] Ultimate

1 Restart

When your PC Hard Drive crashes, you can restart your PC in **Instant PC Recovery Mode** directly from your external USB hard drive.

2 Resume

Instant PC Recovery has you up and running within a few short moments! Access your applications, data and personal settings, including the Internet without interruption.

3 Recover

Use our **Two-Click Recovery** feature to completely re-store your operating system, applications, personal settings and data.

Product Features	Description	BounceBack Ultimate
Instant PC Recovery	Restart and resume operating your Windows system from your external USB hard drive if you have a hard drive failure.	●
Two-Click Recovery	Recover your system back to its last backed up state with only two clicks.	●
QuickRestore™	Restore single files, folders quickly and easily.	●
Backup Sets	Create custom sets of data to backup and specify multiple backup destinations.	●
Scheduling	Schedule backup sets by date and time, or upon connection.	●
Continuous Data Protection	Saves time by automatically backing up only those files that have been changed or newly created on a continuous basis.	●
Parallel Backup	Backup to different local or mapped network drive, at the same time.	●
Native File Format	All data is backed up in its original file format for easy access, data sharing and transportability.	●
Synchronization	Synchronize data between multiple computers/hard drives.	●
Versioning	View and restore previously saved versions of files.	●
Drive Formatting	Automatically partition and format the ABS drive to match your computer's hard drive.	●
Encryption	Protect your valuable data with AES 256 file and folder encryption.	●

- System Requirements
- Windows 7/Vista/XP
 - 512MB of System RAM (1GB or more recommended)
 - USB 2.0
